

YASAR AMEEN H N

Agentic AI Developer | Full-Stack Engineer

+91 7022388449 | yasarameenhnise2025@gmail.com | [LinkedIn](#) | [GitHub](#) | Bengaluru

PROFESSIONAL SUMMARY

Information Science Engineer with hands-on experience in Generative AI development, Agentic AI systems, RAG pipelines, and full-stack application engineering. Strong expertise in Python, LangChain, LangGraph, FastAPI, and React with experience deploying production-grade AI applications. Skilled in prompt engineering, NLP, multi-agent orchestration, and REST API development. Holds Microsoft Azure AI certifications. Fast learner, end-to-end builder, and collaborative team player open to entry-level AI and software engineering roles.

TECHNICAL SKILLS

Programming Languages: Python, Java, SQL, JavaScript (basic)

AI & ML Frameworks: LangChain, LangGraph, Gemini API, HuggingFace, LlamaIndex, Scikit-learn, Pandas, TensorFlow (introductory)

Generative AI: Large Language Models (LLM), RAG Pipelines, Prompt Engineering, Multi-Agent Systems, NLP, Agentic AI

Frontend & Backend: React 18, Vite, TailwindCSS, FastAPI, REST APIs, Streamlit, JSON integrations

Cloud & DevOps: Microsoft Azure AI, AWS Bedrock, GCP (basic), Docker, Git, CI/CD Pipelines, Linux

Databases & Vector DBs: MySQL, SQL (Basic–Advanced), Pinecone, FAISS, Chroma, Qdrant (conceptual)

Others: Prompt versioning, guardrails, PII filtering, agent evaluation, decision trace documentation

INTERNSHIP EXPERIENCE

Java Developer Intern

Feb 2025 – May 2025

Codegnan Destination

- Applied OOP principles including inheritance, encapsulation, and polymorphism to develop modular, maintainable Java applications.
- Built a quiz application with scoring logic, lifelines, and comprehensive edge-case handling with clean code structure.

Technologies Used: Java, OOP

Data Science Intern

Feb 2024 – Mar 2024

YHills, Bengaluru

- Collected, cleaned, and preprocessed large-scale datasets with over 100,000 rows using Python and Pandas for ML pipeline readiness.
- Automated repetitive data cleaning and feature engineering tasks, improving overall team efficiency by 30%.
- Applied statistical analysis and data visualization techniques to extract actionable insights from raw datasets.

Technologies Used: Python, Pandas, SQL

PROJECTS

OmniMind — Full-Stack Autonomous Agentic AI System

Designed and built a production-grade autonomous AI agent system using LangChain and LangGraph with ReAct-style reasoning.

- Built multi-agent pipelines with automatic tool routing across NL-to-SQL, web search, Wikipedia, and Arxiv — AI systems reasoning and acting across multiple data sources.
- Implemented complete RAG pipeline: document chunking, HuggingFace embeddings, Pinecone vector retrieval, and grounding for accurate knowledge-based responses.
- Developed scalable FastAPI backend with REST API endpoints, rate limiting, PII filtering, and secure error handling — 100% uptime during testing.
- Built React 18 + Vite + TailwindCSS frontend with Markdown rendering for complete full-stack end-to-end delivery.
- Designed prompt engineering framework: system prompts, tool prompts, guardrails, and versioned templates for consistent agent behaviour.

- Evaluated model accuracy, latency, and reliability — documented decision traces and error patterns achieving stable production-ready performance.

Technologies Used: Python, LangChain, LangGraph, FastAPI, Pinecone, HuggingFace, Gemini API, React

AI-Powered Credit Card Expense Optimizer

Built a multi-agent AI pipeline to analyze financial transactions and generate personalized savings recommendations.

- Designed 3-agent LangChain workflow (categorization, validation, recommendation) achieving accurate financial data analysis.
- Integrated Gemini Vision API with few-shot prompting for structured data extraction from unstructured financial document images — OCR-based document understanding.
- Implemented Pydantic-validated typed data models with pytest-compatible structure ensuring production-quality, maintainable Python code.
- Deployed Streamlit web application with real-time AI output, downloadable reports, and JSON export.

Technologies Used: Python, LangChain, Gemini Vision API, Streamlit, Pandas, Pydantic

Wireless Charging Vehicle Using IoT

Led a team to develop an IoT-enabled wireless EV charging system with real-time monitoring.

- Designed inductive charging system using ESP32 with real-time web-based monitoring and vehicle motion control.
- Built failure-safe fallback logic and offline local Wi-Fi monitoring for battery status — achieving reliable hardware-software integration.

Technologies Used: ESP32, IoT, Python, Web GUI

EDUCATION

Bachelor of Engineering (B.E.) – Information Science and Engineering	2022 – 2025
The Oxford College of Engineering, Bengaluru	
Diploma – Computer Science and Engineering	2019 – 2021
APS Polytechnic, Bengaluru	

CERTIFICATIONS

Get Started with AI Agent Development on Azure (Microsoft Learn) | Introduction to Generative AI and Agents (Microsoft Learn) | Introduction to AI Concepts (Microsoft Learn) | Java (Basic) – HackerRank | SQL (Basic, Intermediate, Advanced) – HackerRank
